## 1. What is Geobiology?, 1

ANDREW H. KNOLL, DONALD E. CANFIELD, AND KURT O. KONHAUSER

- 1.1 Introduction, 1
- 1.2 Life interacting with the Earth, 2
- 1.3 Pattern and process in geobiology, 2
- 1.4 New horizons in geobiology, 3
- References, 3

## 2. The Global Carbon Cycle: Biological Processes, 5

PAUL G. FALKOWSKI

- 2.1 Introduction, 5
- 2.2 A brief primer on redox reactions, 5
- 2.3 Carbon as a substrate for biological reactions, 5
- 2.4 The evolution of photosynthesis, 8
- 2.5 The evolution of oxygenic phototrophs, 11
- 2.6 Net primary production, 13
- 2.7 What limits NPP on land and in the ocean?, 15
- 2.8 Is NPP in balance with respiration?, 16
- 2.9 Conclusions and extensions, 17
- References, 18

## 3. The Global Carbon Cycle: Geological Processes, 20

KLAUS WALLMANN AND GIOVANNI ALOISI

- 3.1 Introduction, 20
- 3.2 Organic carbon cycling, 20
- 3.3 Carbonate cycling, 22
- 3.4 Mantle degassing, 23
- 3.5 Metamorphism, 24
- 3.6 Silicate weathering, 24
- 3.7 Feedbacks, 25
- 3.8 Balancing the geological carbon cycle, 26
- 3.9 Evolution of the geological carbon cycle through Earth's history: proxies and models, 27
- 3.10 The geological C cycle through time, 30
- 3.11 Limitations and perspectives, 32
- References, 32

## 4. The Global Nitrogen Cycle, 36

BESS WARD

- 4.1 Introduction, 36
- 4.2 Geological nitrogen cycle, 36
- 4.3 Components of the global nitrogen cycle, 38
- 4.4 Nitrogen redox chemistry, 40
- 4.5 Biological reactions of the nitrogen cycle, 40

- 4.6 Atmospheric nitrogen chemistry, 45
- 4.7 Summary and areas for future research, 46
- References, 47

## 5. The Global Sulfur Cycle, 49

DONALD E. CANFIELD AND JAMES FARQUHAR

- 5.1 Introduction, 49
- 5.2 The global sulfur cycle from two perspectives, 49
- 5.3 The evolution of S metabolisms, 53
- 5.4 The interaction of S with other biogeochemical cycles, 55
- 5.5 The evolution of the S cycle, 59
- 5.6 Closing remarks, 61
- Acknowledgements, 62
- References, 62

## 6. The Global Iron Cycle, 65

BRIAN KENDALL, ARIEL D. ANBAR, ANDREAS KAPPLER AND KURT O. KONHAUSER

- 6.1 Overview, 65
- 6.2 The inorganic geochemistry of iron: redox and reservoirs, 65
- 6.3 Iron in modern biology and biogeochemical cycles, 69
- 6.4 Iron through time, 73
- 6.5 Summary, 83
- Acknowledgements, 84
- References, 84

## 7. The Global Oxygen Cycle, 93

JAMES F. KASTING AND DONALD E. CANFIELD

- 7.1 Introduction, 93
- 7.2 The chemistry and biochemistry of oxygen, 93
- 7.3 The concept of redox balance, 94
- 7.4 The modern O<sub>2</sub> cycle, 94
- 7.5 Cycling of O<sub>2</sub> and H<sub>2</sub> on the early Earth, 98
- 7.6 Synthesis: speculations about the timing and cause of the rise of atmospheric O<sub>2</sub>, 102
- References, 102

## 8. Bacterial Biomineralization, 105

KURT KONHAUSER AND ROBERT RIDING

- 8.1 Introduction, 105
- 8.2 Mineral nucleation and growth, 105
- 8.3 How bacteria facilitate biomineralization, 106
- 8.4 Iron oxyhydroxides, 111
- 8.5 Calcium carbonates, 116
- Acknowledgements, 125
- References, 125

## 9. Mineral–Organic–Microbe Interfacial Chemistry, 131

DAVID J. VAUGHAN AND JONATHAN R. LLOYD

- 9.1 Introduction, 131
- 9.2 The mineral surface (and mineral–bio interface) and techniques for its study, 131
- 9.3 Mineral-organic-microbe interfacial processes: some key examples, 140
- Acknowledgements, 147
- References, 147

## **10. Eukaryotic Skeletal Formation, 150**

ADAM F. WALLACE, DONGBO WANG, LAURA M. HAMM, ANDREW H. KNOLL  
AND PATRICIA M. DOVE

- 10.1 Introduction, 150
- 10.2 Mineralization by unicellular organisms, 151
- 10.3 Mineralization by multicellular organisms, 164
- 10.4 A brief history of skeletons, 173
- 10.5 Summary, 175
- Acknowledgements, 176
- References, 176

## **11. Plants and Animals as Geobiological Agents, 188**

DAVID J. BEERLING AND NICHOLAS J. BUTTERFIELD

- 11.1 Introduction, 188
- 11.2 Land plants as geobiological agents, 188
- 11.3 Animals as geobiological agents, 195
- 11.4 Conclusions, 200
- Acknowledgements, 200
- References, 200

## **12. A Geobiological View of Weathering and Erosion, 205**

SUSAN L. BRANTLEY, MARINA LEBEDEVA AND ELISABETH M. HAUSRATH

- 12.1 Introduction, 205
- 12.2 Effects of biota on weathering, 207
- 12.3 Effects of organic molecules on weathering, 209
- 12.4 Organomarkers in weathering solutions, 211
- 12.5 Elemental profiles in regolith, 213
- 12.6 Time evolution of profile development, 217
- 12.7 Investigating chemical, physical, and biological weathering with simple models, 218
- 12.8 Conclusions, 222
- Acknowledgements, 223
- References, 223

## **13. Molecular Biology's Contributions to Geobiology, 228**

DIANNE K. NEWMAN, VICTORIA J. ORPHAN AND ANNA-LOUISE REYSENBACH

- 13.1 Introduction, 228
- 13.2 Molecular approaches used in geobiology, 229
- 13.3 Case study: anaerobic oxidation of methane, 238
- 13.4 Challenges and opportunities for the next generation, 242
- Acknowledgements, 243
- References, 243

## **14. Stable Isotope Geobiology, 250**

D.T. JOHNSTON AND W.W. FISCHER

- 14.1 Introduction, 250
- 14.2 Isotopic notation and the biogeochemical elements, 253
- 14.3 Tracking fractionation in a system, 255
- 14.4 Applications, 258
- 14.5 Using isotopes to ask a geobiological question in deep time, 261
- 14.6 Conclusions, 265
- Acknowledgements, 266
- References, 266

**15. Biomarkers: Informative Molecules for Studies in Geobiology, 269**

ROGER E. SUMMONS AND SARA A. LINCOLN

- 15.1 Introduction, 269
  - 15.2 Origins of biomarkers, 269
  - 15.3 Diagenesis, 269
  - 15.4 Isotopic compositions, 270
  - 15.5 Stereochemical considerations, 272
  - 15.6 Lipid biosynthetic pathways, 273
  - 15.7 Classification of lipids, 273
  - 15.8 Lipids diagnostic of Archaea, 277
  - 15.9 Lipids diagnostic of Bacteria, 280
  - 15.10 Lipids of Eukarya, 283
  - 15.11 Preservable cores, 283
  - 15.12 Outlook, 287
- Acknowledgements, 288  
References, 288

**16. The Fossil Record of Microbial Life, 297**

ANDREW H. KNOLL

- 16.1 Introduction, 297
  - 16.2 The nature of Earth's early microbial record, 297
  - 16.3 Paleobiological inferences from microfossil morphology, 299
  - 16.4 Inferences from microfossil chemistry and ultrastructure (new technologies), 302
  - 16.5 Inferences from microbialites, 306
  - 16.6 A brief history, with questions, 308
  - 16.7 Conclusions, 311
- Acknowledgements, 311  
References, 311

**17. Geochemical Origins of Life, 315**

ROBERT M. HAZEN

- 17.1 Introduction, 315
  - 17.2 Emergence as a unifying concept in origins research, 315
  - 17.3 The emergence of biomolecules, 317
  - 17.4 The emergence of macromolecules, 320
  - 17.5 The emergence of self-replicating systems, 323
  - 17.6 The emergence of natural selection, 326
  - 17.7 Three scenarios for the origins of life, 327
- Acknowledgements, 328  
References, 328

**18. Mineralogical Co-evolution of the Geosphere and Biosphere, 333**

ROBERT M. HAZEN AND DOMINIC PAPINEAU

- 18.1 Introduction, 333
  - 18.2 Prebiotic mineral evolution I – evidence from meteorites, 334
  - 18.3 Prebiotic mineral evolution II – crust and mantle reworking, 335
  - 18.4 The anoxic Archean biosphere, 336
  - 18.5 The Great Oxidation Event, 340
  - 18.6 A billion years of stasis, 341
  - 18.7 The snowball Earth, 341
  - 18.8 The rise of skeletal mineralization, 342
  - 18.9 Summary, 343
- Acknowledgements, 344  
References, 344

## 19. Geobiology of the Archean Eon, 351

ROGER BUICK

- 19.1 Introduction, 351
- 19.2 Carbon cycle, 351
- 19.3 Sulfur cycle, 354
- 19.4 Iron cycle, 355
- 19.5 Oxygen cycle, 357
- 19.6 Nitrogen cycle, 359
- 19.7 Phosphorus cycle, 360
- 19.8 Bioaccretion of sediment, 360
- 19.9 Bioalteration, 365
- 19.10 Conclusions, 366
- References, 367

## 20. Geobiology of the Proterozoic Eon, 371

TIMOTHY W. LYONS, CHRISTOPHER T. REINHARD, GORDON D. LOVE  
AND SHUHAI XIAO

- 20.1 Introduction, 371
- 20.2 The Great Oxidation Event, 371
- 20.3 The early Proterozoic: Era geobiology in the wake of the GOE, 372
- 20.4 The mid-Proterozoic: a last gasp of iron formations, deep ocean anoxia, the 'boring' billion, and a mid-life crisis, 375
- 20.5 The history of Proterozoic life: biomarker records, 381
- 20.6 The history of Proterozoic life: mid-Proterozoic fossil record, 383
- 20.7 The late Proterozoic: a supercontinent, oxygen, ice, and the emergence of animals, 384
- 20.8 Summary, 392
- Acknowledgements, 393
- References, 393

## 21. Geobiology of the Phanerozoic, 403

STEVEN M. STANLEY

- 21.1 The beginning of the Phanerozoic Eon, 403
- 21.2 Cambrian mass extinctions, 405
- 21.3 The terminal Ordovician mass extinction, 405
- 21.4 The impact of early land plants, 406
- 21.5 Silurian biotic crises, 406
- 21.6 Devonian mass extinctions, 406
- 21.7 Major changes of the global ecosystem in Carboniferous time, 406
- 21.8 Low-elevation glaciation near the equator, 407
- 21.9 Drying of climates, 408
- 21.10 A double mass extinction in the Permian, 408
- 21.11 The absence of recovery in the early Triassic, 409
- 21.12 The terminal Triassic crisis, 409
- 21.13 The rise of atmospheric oxygen since early in Triassic time, 410
- 21.14 The Toarcian anoxic event, 410
- 21.15 Phytoplankton, planktonic foraminifera, and the carbon cycle, 411
- 21.16 Diatoms and the silica cycle, 411
- 21.17 Cretaceous climates, 411
- 21.18 The sudden Paleocene–Eocene climatic shift, 414
- 21.19 The cause of the Eocene–Oligocene climatic shift, 415
- 21.20 The re-expansion of reefs during Oligocene time, 416
- 21.21 Drier climates and cascading evolutionary radiations on the land, 416
- References, 420

## 22. Geobiology of the Anthropocene, 425

DANIEL P. SCHRAG

22.1 Introduction, 425

22.2 The Anthropocene, 425

22.3 When did the Anthropocene begin?, 426

22.4 Geobiology and human population, 427

22.5 Human appropriation of the Earth, 428

22.6 The carbon cycle and climate of the Anthropocene, 430

22.7 The future of geobiology, 433

Acknowledgements, 434

References, 435

Index, 437

*Colour plate pages fall between pp. 228 and 229*

### COMPANION WEBSITE

This book has a companion website:

[www.wiley.com/go/knoll/geobiology](http://www.wiley.com/go/knoll/geobiology)

with Figures and Tables from the book for downloading.
